WORK HISTORY

Technical Writer, Virtusa for Google

October 2022 – Present

- Crafted a compelling value proposition for a mobile app development framework migration to Google's Server Platform for development team executives, convincing half of the business areas in scope to fully migrate their framework, improving developer experience and standardizing. Subsequently, the resulting reduction in maintenance costs of the framework translated to a decrease in on-call involvement in the release process by 81% from 402 manual involvement incidences to 74, allowing on-call to focus more time on feature work.
- AI-augmented technical writing, experimentation and testing: Discovered and measured the impact of genAI tools on technical writing and bug risk prediction - what worked and what didn't work. After demonstrating an average of 45% time savings by automating text translation from English into other languages, and restructuring text according to existing templates, my team adopted these new tools.
- Developed a resource index for DevAI and integrated glossary references, including translating the GenAI Quickstart guide.
- Authored a detailed case study for YouTube's client-side library migration to Server Platform, revealing cost savings for YouTube of ~0.58% of the average cost for off-platform services.
- Collaborated with instructional designers to design Python online courses for an advanced data analytics course, garnering 60,000 enrollment for each 6-month

course cycle, a 4.7 rating, and training data analysts for an estimated 114,000 open positions each quarter.

Senior Technical Writer, Ford Motor Company, Contract

January 2022 – October 2022

- Documented onboarding and development best practices and participated in GitHub forum discussions for the enterprise AI/ML platform, Mach1ML, allowing for important data insights and providing a link to the executive analytics dashboard. Developed comprehensive training and onboarding materials, including videos, articles, and blogs, which helped fully onboard ML engineers and data scientists in the business intelligence area.
- Contributed to NLP and MLOps process and software documentation.
- Assisted in designing a GenAI hackathon for an in-car chat app and produced end-user facing blogs and data visualizations.
- Collaborated within a Sharepoint environment for seamless workflow.

Senior Technical Writer, EPAM Systems, Inc., Remote

June 2019 – January 2022

- Produced user-friendly one-page mandatory service announcements.
- Engaged in user feedback analysis.
- Led and designed bug utilization study for the vendor team, which revealed an 80% within SLO resolution rate.
- Documented API (REST, JSON, XML) using CI/CD tools and Markdown/static site generator templates.
- Utilized CI/CD tool Jenkins and Google Cloud Platform tools.
- Drafted SOPs, managed documents, and developed Apps Script tools for Project Management documentation.

Business Development Consultant, Day Translations, Inc., Mexico

September 2018 – May 2019

- Spearheaded Business 2 Business Sales, 1000 leads within 3 months, prospected 5000 leads internationally, and nurtured existing leads.
- Oversaw translation project management, drafted Request for Proposals, and managed CRM.

- Conducted marketing analytics, weekly reporting, risk assessment, and stakeholder/partner management.

Project Manager, DGA Consulting Technologies/GPO VALLAS, Mexico City

April 2017 – August 2018

- Monitored the migration of two business associates to Cloudera Big Data platform
- Tracked the development of Cost to Serve and Cost to Produce models across ten tracks in two projects
- Trained the Project Management Team in Trello, and integrated Jira into our management procedures, facilitating Agile methodologies
- Used Agile management to prepare Business Requirements and Work Plans
- Managed finance reporting, conducted weekly risk assessments, and handled stakeholder/partner communications
- Documented departmental and company-wide SAP processes for software reimplementation and improvements
- Managed communication for Digital Out of Home solutions for exterior advertising, including business cases and RFPs
- Coordinated daily scrums with stakeholders and partners, achieving the full implementation of my managed clients to the new platform

Project Manager, VOPA International Ltd, Mexico City

April 2016 – March 2017

- Led development and marketing efforts to achieve a 190% average growth of user universe and a 65-fold increase in Facebook followers within one year.
- Executed hiring processes in conjunction with the CEO.
- Directed a team for content and development objectives in a mobile app startup.
- Researched software development and marketing agencies.
- Proposed and integrated new task management and cloud communication tools.
- Supervised development using git repositories and conducted A/B split testing of landing pages.

EDUCATION

- Master of Science in Journalism, Columbia University, New York, N.Y., 2012
 - Master of Arts, Communications and Language, Multimedia Studies, Polytechnic University, Berlin, Germany, 2010
 - Bachelor of Arts with Honor, Linguistics and Slavic Languages
-

RELATED SKILLS

- Writing and editing skills, content design
- Understanding of AI/ML and GenAI concepts for documenting AI/ML systems
- Information architecture and user empathy
- Project management and digital marketing
- Cloud integration and API Documentation (REST, JSON, XML)
- Online course design and mobile app development prototyping
- UX writing tools (Figma, Sketch, Lucid Charts) and SEO/content strategy
- Familiarity with SQL and databases
- Docs-as-Code toolchain
- gcloud Linux command line
- Cloud Console scripts
