To	GCP Marketplace Kubernetes Sellers
From	"Google Cloud Platform" <CloudPlatform-noreply@google.com>
Subject (Must include product name)	[Action Required] Mandatory updates to your GCP Marketplace Kubernetes listing
Pre-Header	Remove dependencies on deprecated API versions to prevent deployment failures.
<p>Hello GCP Marketplace Partner,</p>	

We're writing to let you know that multiple deprecated Kubernetes API versions will no longer be served in the upcoming release of version 1.22. Version 1.22 is expected to be made available to GCP customers in early August 2021. We recommend that you remove any dependencies on these deprecated API versions to prevent deployment failures.

What does this mean for my customers?

There is no action required on your customers' part, and existing deployments will be unaffected. Please review the section below for the actions you will need to take to support your customers' future deployments. Existing deployments will continue to function.

What do I need to do?

Remove any dependencies on deprecated API versions to prevent deployment failures. To do so, follow these steps:

1. **Update** your app manifests to remove any dependencies on deprecated API versions which will be removed in the 1.22 release. See the Kubernetes [Deprecated API Migration Guide](#).
2. **Complete testing** of rebuilt disk images using [mpdev tool](#).
3. **Push the disk image** to your Marketplace staging repository.
4. **Submit** new disk images in the [Partner Portal](#).
5. **Notify** Google that you have submitted a new image by emailing: cloud-partner-onboarding@google.com

We're here to help

If you have questions or need assistance, please contact [GCP Marketplace Onboarding](#). When you submit your support case, reference "Kubernetes 1.22".

Sincerely,
The GCP Marketplace Team
